

## Automated Redaction

Flexibility, Reliability and Enhanced Speed for your Redaction Processing of Sensitive Information from Recorded and Publicly Facing Documents

**Identity Theft** is an alarming trend and personal data in online public records puts your citizens at risk. Reviewing millions of documents to redact this sensitive information would require manpower that you probably can't afford. Automated redaction is a fast, easy, reliable solution that is amazingly affordable even in these budget-crunched times.

### The Challenge: Redacting your Backlog

ID Shield is a flexible solution – it can be closely integrated with your document management system or it can run independently. Other vendors would have you abandon your current workflow and switch to their indexing system in order to simply perform redaction. With ID Shield YOU control your workflow – we simply add flexible, reliable automated redaction to your current system.

### Trust the Leader in Redaction Technology

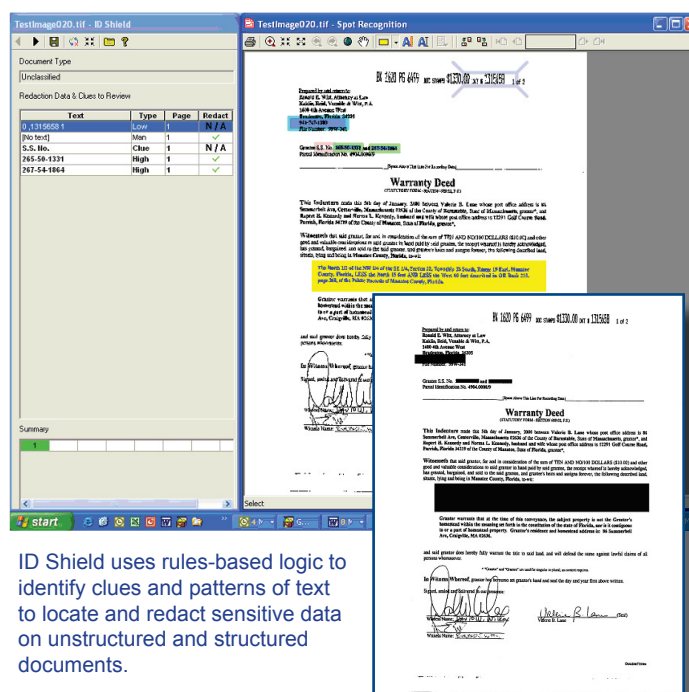

Extract Systems is the industry leader in developing extraction and redaction technologies. But you don't have to take our word for it -- more than 400 customers throughout the U.S. use Extract's redaction, indexing and mapping products everyday.

ID Shield has demonstrated the ability to sustain a rate of up to 87,000 images per day (depending on image characteristics and quality) on a quad processor 3.0 GHz server.

Our system features deliver flexibility, reliability and speed to your redaction process. A user interface is available for standalone operation. By using distributed processing and parallel processing, ID Shield can divide the redaction process between multiple servers in a manner that best suits your workflow. The product also supports batch processing and multiple verifiers for increased efficiency.

**In 2006, 246,000 cases of Identity Theft were reported to the Federal Trade Commission (FTC). These cases reported losses in excess of \$1.1 Billion.**

Consumer Fraud and Identity Theft  
Complaint Data (FTC - February 2007)

ID Shield uses rules-based logic to identify clues and patterns of text to locate and redact sensitive data on unstructured and structured documents.

- **Document Types:** Single and Multi-page TIFFs, PDFs
- **Interface:** Keyboard-driven Option Provides Maximum Efficiency
- **Rule Set:** Comprehensive and Rigorously Tested
- **Learning Curve:** ID Shield Integrates into your Existing Workflow
